

MAHATO RAJESH 400878749

Name, Vorname / Matrikelnummer Surname, first name / Matriculation number

MBA90 / 2

Studiengang / Fachsemester Study program / Subject semester

Analytical Skills for Business / Pross. Dr Huber

Prüfungsfach / Prüfungsdozent:in Examination subject / Examiner

Ans 1 -

(a) Git

Manages and record all
the changes in the project

Stores all the data
offline.

Personal workshare

Repository -

GitHub

A cloud service for
Git .

stores all the
data on cloud

Remote access-
workshare can be
access from anywhere

4/6

(b) Three core components in Git

Repository - All the data of working projects are stored.

Commit - Snapshot of a particular version of project

Branch - Allows users to parallel work in shared environment.

6/6

10/12

2 - (a)

Python

- ^{Used in} ~~Finding~~ Advanced, ML AI and Data Science

- ~~Free~~ It's a Programming Language (Object oriented Programming Language).

- used by Data Engineers, Data Analytics.

- Has Multiple Libraries

- Better visualisation using libraries like matplotlib, ggplot

SQL

- used for Statical and Statistic methods.

- It's a Statical Query Language

- used by Statisticians.

- Compared to Less ~~Libraries~~ ^{not only} Libraries.

- Shows numerical Data.

4/6

2-(d) IDE used for efficiency in development of projects -

3/6

1. Jupyter Notebook -

2 - Virtual Studio code

11/27.

3-(b) Advantages of using no-code/low code tools in Business analytics -

- ① Much easier to use as compared to traditional coding.
- ② Less time required to learn
- ③ Non-tech people can use to analyse the data and find meaningful insights.
- ④ Better Visualisation and communication.
- ⑤ Helpful in showing analysis to Shareholders with visualisation.

8/8

3(a) - n8n - It is used for automation of workflow and AI agents.

- Tableau - It is used for visualisation of data, creating charts, plots and diagrams.

- Power BI - Use very minimal programming code to visualize the data into readable and meaningful dashboard.

9/9

17/12

5-(a)

$$\text{result} \leftarrow 3 + \text{sqrt}(9) - 2^{(2)} * 4/3$$

(b) getwd ()

(c) ? mean()

7/110

45/90
